EDUCATION

Schulich School of Business – York University

Bachelor of Arts in Business Administration

North York, Ontario

Expected 2028

- GPA: 3.6/4.0 | Specialization: Finance and Strategic Management
- Consulting Club VP of Finance and Co-President of Mock Trial Club.

WORK & LEADERSHIP EXPERIENCE

Team CarePal

Edmonton, Alberta

GTM Strategy Intern

Present

- Built a customer service chatbot handling inbound member inquiries, defining intent coverage, escalation paths, and response quality standards
- Led AI integration across the CarePal platform: scoped where LLM features could replace manual workflows and translated them into prioritized product requirements
- Streamlined CRM operations in Freshdesk through restructured ticket routing, tagging, and AI-assisted triage, reducing first-response time and manual handling
- Owned product direction for Zolo, the platform's caregiver-facing AI chatbot, personalizing resource recommendations by user query, location, and Caregiver Burnout Inventory score

Royal Canadian Legion

Aurora, Ontario

Business Process Analyst

May 2026 – August 2026

- Audited administrative and operational workflows across key branch functions, mapping end-to-end processes and identifying bottlenecks, redundancies, and undocumented procedures.
- Redesigned and standardized core procedures into a centralized documentation library with process flow maps, cutting manual effort and onboarding time while improving cross-functional consistency.
- Built and delivered process improvement tools: an interactive AI assistant answering staff and volunteer questions on workflows and procedures, redesigned facility floor plans, and Excel-based tracking systems.

Team CarePal

Edmonton, Alberta

Product Analyst

April 2026 – August 2026

- Analyzed customer support and user interaction data across the CarePal platform to identify drop-off points and product gaps, translating findings into prioritized recommendations for workflow and feature improvements.
- Built a structured taxonomy for customer service inquiries, classifying and tagging support volume to measurably improve AI response accuracy and surface recurring issues as product requirements.
- Defined escalation logic between AI support systems and human care navigators, partnering with product and engineering to convert routing rules into implementable requirements and validate outcomes post-release.
- Developed tracking and reporting on support performance metrics — resolution rate, escalation frequency, and response consistency — to evaluate feature impact and inform roadmap decisions.

PROJECTS

Cari – AI Customer Support Bot for Team CarePal

Built an AI-powered customer support chatbot for the Team CarePal platform to handle caregiver and user inquiries, using conversational AI, web deployment, and UI/UX design.

Multi-Agent AI Trading Desk

Developed a multi-agent AI trading desk that coordinates specialized agents for market research, analysis, and trade decision-making, using multi-agent AI orchestration and a web-based interface.

AI Case Interview Coach

Built an AI case interview coaching tool that helps candidates practice consulting case interviews with interactive prompts and real-time feedback, using LLM-based AI and responsive web development.

Snapshots in Time – Educational History Game (Unity WebGL) – Collab with StemMinds

Built an interactive Unity WebGL game using Unity, C#, WebGL deployment, and UI/UX design.

SMSJYA Helping Hands – Community Non-Profit Website

Designed and maintained a non-profit website using HTML, CSS, JavaScript, responsive web development, and accessibility-focused UI/UX design.
